I WOULD LIKE TO TOUCH

ON THE UNEMPLOY-
MENT SIDE IN OUR COUN-
TRY, LET OUR LEADERS
LOOK AT THIS ISSUE
WITH BIG EYES. THIS IS
BECAUSE MOSTLY

PEOPLE OF OUR COUN-
TRY ARE GOING WITH
LONG WAYS NOW, DUE
TO THE UNEMPLOY-
MENT.

Kanamutenya, WHk
It is becoming habit that many Namibian are losing their animals (cattle's and Goats) into neighboring countries like Angola and now Zambia. What is the solution to these comrades? To me the solution is simple, I know is costly but effective, let the government elect the Strong iron fencing between our neighbors (I mean fencing like the one they put around Central Hospital here in Windhoek) Because no one gone destroy it and the gates will be better controlled and

it will be a benefit to the community along the border because they will be employed for such project, It will not need to bring in workers from somewhere rather you employ locals because it a job intensive and those who wants to work gone get job maybe 2-3 years then we gone do away with the cordon fence even (RED LINE) or "What ever you call it".

What are your ideas and input comrades? Please let us discuss these issues for our leaders to get ideas from the people parliament!!!!!!!

VACANCIES

AGRIBANK

Windhoek
10 Post Street Mall

Enquiries: Ms D Tsaus @ 061-2074214

Closing date: 29 October 2010

Only shortlisted candidates will be contacted

AGRICULTURAL BANK OF NAMIBIA

Audi A2 electric car sets a journey record with one charge

The "Lekker Mobil", an Audi A2 with an electric engine, passes the front of Berlin's Brandenburg Gate on Tuesday. The electric car drove 600km from Munich in southern Germany to Berlin without recharging its battery, setting what organisers hailed as a new world distance record for an everyday vehicle.

BERLIN, — An Audi A2 electric car reached Berlin on Tuesday after running about 600 km from Munich with one charge, setting a new journey record for electric car.

German Economic Minister Rainer Bruederle welcomed this car at the courtyard of the Economy Ministry, praising it a "world record."

Bruederle said the car is a "technological leap forward," as electric cars are usually to be recharged after running 60 or 70 km.

The electric vehicle was developed by electric car firm Lekker Energie and energy storage company DBM Energy on a basis of Audi A2.

The driver drove the car at a recommended speed of 130 km per hour and the car shared many characters with a normal car, like power steering, airbags, air-conditioning and heated seats, said by the company representative.

The car has super light lithium metal-polymer batteries, which are not just lighter than conventional solutions but are more energy efficient and powerful than ordinary batteries, the representative said

Its 27 year old driver Mirko Hannemann even played a joke with journalists after 7-hour driving, saying "any journalist

who wants to charge their iPhones can use our left electricity."

In May, the German government launched its National Electric Mobility Platform (NEMP) to support the development of electric car, aiming to realize one million electric cars on German road by 2020.

In July, German energy Giant RWE group said it planed to install around 400 charging stations in Germany's densely populated Ruhr region till the end of this year.

German car manufactures like BMW, Volkswagen have also signaled that they planed to put their first electrical cars onto market in 2013.

However, compared with its Japanese rivals, Germany has still been left behind on electric cars at present and needs efforts to catch up.

Last week, Japan's Nissan said it would begin to sell its all-electric car Leaf, which can run 160 km per charge in city driving, in Japan and the U.S. at the end of 2010. In 2011, the sale of Leaf will expand to Europe. (Xinhua)
